The following data tables give the main characteristics of our standard fans ; for detailed information or specific request, call our local sales team.

## Catalogue data

In this DC and AC Compact Fans catalogue, we offer models which are in general use.

Our standard product range includes many other versions with variations in supply voltage and speed.

Specific fans are available and can be made to customers specification.

Our application engineers work constantly with our customers specification to offer the best fan selection..

In this way, many special units are produced both for commercial and military applications.

Our test laboratories in Vendôme (France) are available for customers to test their prototype equipment in order to determine the optimum cooling solution.

Further products catalogue:

- 400 HZ FANS AND HIGH PERFORMANCE FANS

All the datasheets are still available on the website:

[www.etrinet.com](http://www.etrinet.com)

## ELECTRICAL, AERODYNAMIC AND INDUSTRIAL DATA

The following information can be found in the data tables:

- Nominal voltage and voltage range
- Rated speed which is an approximate value of the fan speed operating at free air
- Power consumption and line current at free air
- Maximum static pressure corresponding to the pressure at no flow condition
- Maximum air delivery corresponding to airflow at no static pressure value
- Total noise level in decibels from the equilibrium curve A measured 1 meter from the air inlet, the fan operating in free air.

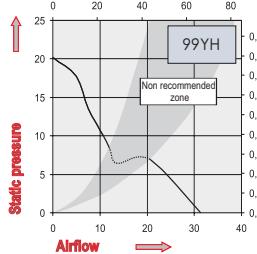

## AERODYNAMIC CURVES

The aerodynamic graphs are constructed using a test chamber and method described in CCTU Standard 18.10. They are drawn up for an air density of 1,2 kg/m<sup>3</sup>.

## CONDITIONS OF USE FOR DC AXIAL FANS

Unstable operating zone for ETRI DC axial fans

Many axial flow fan characteristics have a "stall point", also referred to as the "unstable zone" or "pumping zone". It is recommended that fans should not be allowed to operate around the fan stall point otherwise there are serious risks of:

- impeller speed fluctuation causing mechanical instability
- increased motor temperature rise, especially on the bearings
- increased noise and vibration levels
- destruction of the motor mountings, motor bearings, and the fan impeller.

Some small diameter fans may be operated around the stall point, or at higher pressures and lower flow rates, but strictly with the written approval of manufacturer ETRI.

## EXAMPLE OF CODIFICATION FOR DC FANS

246 DS 1 L P 1 1 001

Series code

Speed (from lower to higher):

DL, DM, DH, DS, DX, DZ, DY, DG, DR; DK

DW or YW = custom speed

Voltage: 1 = 12 V; 2 = 24 V; 3 = 28 V; 4 = 48 V;  
5 = 5 V; 7 = 72 V; 8 = 110 V; 9 = special voltage

Connection: L = leads; T = terminals

Housing material: P = plastic; M = metal

Bearing system: 1 = ball bearings;

1 = no option; 3 = speed sensor; 4 = alarm;

Special features: 500 = TTL output in case of speed sensor option; 510 = rib type;  
600 = tropicalization; 601 = IP54; 602 = IP55;  
other: custom designs

## EXAMPLE OF CODIFICATION FOR AC FANS

125 XR 0 1 81 001

Speed

Construction code: 0 = ball bearings;

5 = high temperature fan

1 = standard; 3 = speed sensor

Voltage: 81 = 208-240 V; 82 = 115 V; 8L = 24 V;

Design code: 000 standard version;

XXX = option (salt spray protection, tropicalization...)

148 VK 0 2 81 000

Series code

Speed

Construction code: 0 = ball bearings;

2 = standard; 4 = speed sensor

Voltage: 81 = 208-240 V; 82 = 115 V; 8L = 24 V;

Design code: 001 standard version;

XXX = option (salt spray protection, tropicalization...)

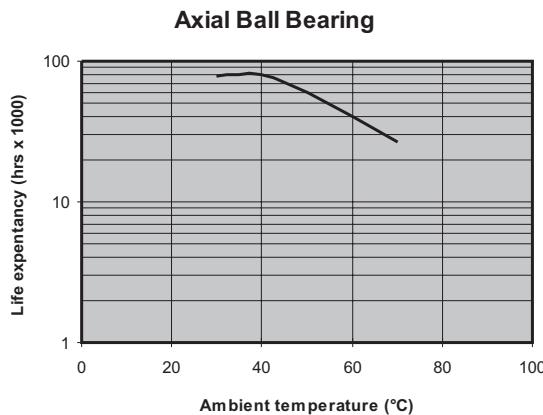

## Technical guide

### LIFE EXPECTANCY

The mechanical and electrical design, the choice of materials, and the high level of inspection give our fans excellent reliability. Special attention is given to bearings, both in design and production, i.e.: choice of bearings and lubricants, accurate machining, strict alignment, very careful balancing and inspection of 100 % of finished fans.

Life expectancy is calculated on a L-10 basis.

The following curves describe the life expectancy of the fans at a given temperature, after which 90 % of them are still operating.

### OPTIONS

#### DEGREES OF PROTECTION - IP

ETRI supplies a full range of AC and BDC fans offering high level of protection against dust or water.

Most of our standard models, and all our high performance fans are available with protection for use in specific conditions, up to IP55 environments.

#### SPEED SENSORS AND ALARMS

Most ETRI DC and AC Fans feature a speed sensor that detects number of pulses per revolution, or a rotation detector (on/off signal) which indicates if the fan works correctly.

ETRI provides also a full range of alarm boxes (relay and dry contact) to read directly the signal of the speed sensor or alarm output.

#### RoHS compliance

ETRI fans of this catalogue are **RoHS compliant** according to 2002/95/EC European Directive. For more information, please refer to Standards and ECOFIT compliance chapter.

**Important notice!**

#### About fans performance:

Values indicated in this catalogue are based on free delivery (no pressure value) and shutoff (no flow condition).

### TOLERANCES

The values shown in the data tables and the various curves have been measured from standard design equipment and should be considered nominal. Without particular specifications, we accept the tolerances given at the beginning of each catalogue. Drawings: without particular specifications, we accept a tolerance of  $\pm 1$  mm.

### TOLERANCES FOR DC FANS (Indicative values)

#### Series 146D, 99Y, 158D, 121D, 148D

Speed / airflow	+/- 6 %
Static pressure	+/- 12 %
Input power	+/- 15 %
Voltage	See voltage range on each technical datasheet

#### Other axial DC series and DC centrifugal fans

Speed / airflow	+/- 8 %
Static pressure	+/- 15 %
Input power	+/- 25 %
Voltage	See voltage range on each technical datasheet

### TOLERANCES FOR AC FANS (Indicative values)

#### Low speed AC fans series: 126LH, 126LJ, 99XM, 99XW, 146DF, 98XC, 98XY, 141LV, 141LT, 129XR, 125LG, 125XL, 148VE, 148VP

Speed / airflow	+/- 10 %
Static pressure	+/- 20 %
Input power	+/- 30 %
Current	+/- 30 %
Voltage: 208-240V	-10 % +6 %
Other voltages:	+/- 10 %

#### Other AC axial series and AC centrifugal fan

Speed / airflow	+/- 4 %
Static pressure	+/- 8 %
Input power	+/- 10 %
Current	+/- 10 %
Voltage: 208-240V	-10 % +6 %
Other voltages:	+/- 10 %

## Technical guide - Selecting a fan

Forced convection cooling is an effective solution to dissipate heat in electronic equipment. This technical guide will help you to determine the performance of the required fan for your application.

### BASIC REQUIREMENTS

**VOLTAGE :** The first step is to determine the nominal voltage; this can be AC or DC. ETRI fans cover all voltage ranges from 5V to 240V.

**DIMENSIONS:** Optimizing performance within the available space envelope available is the most important criteria. ETRI offers a complete compact range of fans and blowers from 25x25x10 mm up to ø 172 mm.

### DETERMINING NECESSARY AIRFLOW

Dissipated power has to be determined first. If this value is unknown, the estimation can be done by taking the power consumed by the equipment and the efficiency (which is approximatively 75% for electronics equipments).

Example :

Consumed power = 500 W

Power to be dissipated:  $500 \times 25\% = 125W$

The graph below (fig.1) shows how to calculate the airflow according to the dissipated power, using the formula:

$$\text{Airflow (l/s)} = \frac{P(W)}{1,2 \times \Delta t}$$

This calculation does not take into consideration pressure drop, which has a direct impact on the airflow. Pressure drop is defined in the next paragraph.

### CALCULATING NECESSARY STATIC PRESSURE

Each component mounted in the equipment opposes a resistance to air circulation. These accumulated resistances are called the "pressure drop".

The pressure drop is balanced by the fan static pressure

which is expressed in mmH<sub>2</sub>O, InH<sub>2</sub>O or Pa.

The necessary airflow of the fan must be specified at a certain static pressure.

Pressure drop is not easily calculable, especially in complex equipment. In cooling applications, pressure drop can be calculated according to duct diameter, length, bends or other deviations.

Here is the basic principle to define pressure drop by experimentation:

A specified fan, which air performance is known, is mounted on the equipment. The air speed at the outlet is measured with an anemometer. The airflow is calculated as follows :

$$A = \text{Air Flow (l/s)}$$

$$O = \text{Outlet Section (m}^2\text{)}$$

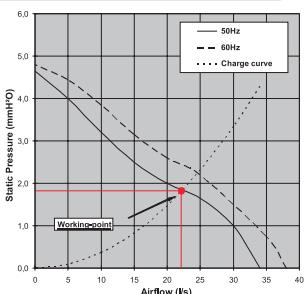

$$S = \text{Air Speed (m/s)}$$

$$A = \frac{S \times O}{1000}$$

The static pressure, corresponding to the measured airflow, can therefore be read on the fan performance curve. The value of this static pressure is the second parameter to consider when selecting a fan.

### CHOOSING THE APPROPRIATE FAN WITH THE WORKING POINT

The combination of necessary airflow and static pressure gives a value which is called working point. It is now very easy to choose the appropriate fan by selecting a model in the catalogue, which curve meets the working point.

**Fig.1 - Determining necessary airflow**

P: represents the power to be dissipated (in watts)

Dt: represents the temperature difference between internal temperature of the equipment and ambient temperature

Q: represents the air flow of the fan:

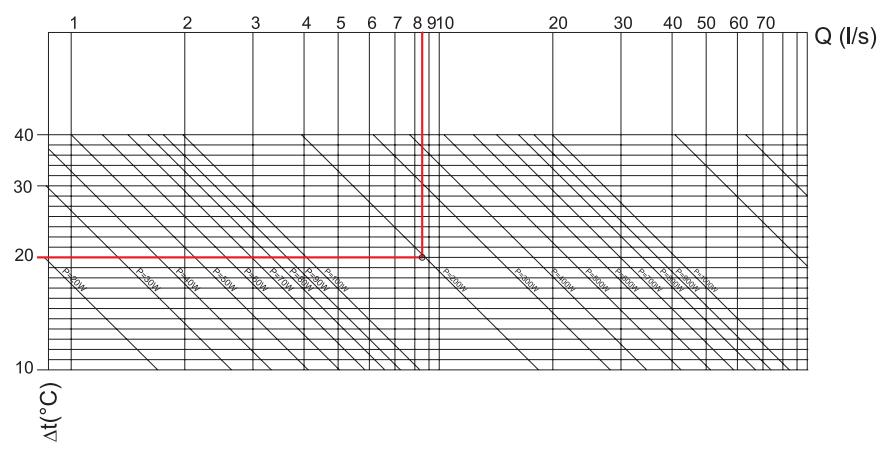

$$A = \frac{P(W)}{1,2 \times \Delta t} \text{ l/s}$$

THE AIR FLOW IS DETERMINED BY THE PROJECTION ON THE GRAPH BELOW FROM THE INTERSECTION POINT OF THE LINES W AND Dt ON THE AIR FLOW SCALE.

Example: Power to be dissipated: 200W

Δt: 20°C

Necessary airflow to cool is: 8,5 l/s

## Standards and ECOFIT compliance

### QUALITY SYSTEM ISO 9001: 2008

The rigorous examination of our management system by AFAQ, one of the leading certification bodies in the world, has highlighted the quality of the procedures implemented.

Our commitment to this approach which has mobilized the entire company's expertise was driven by our ongoing commitment to improving not only our performance but also the quality of our services.

Today, AFAQ ISO 9001 version 2008 certification as the demonstration of our commitment to quality service, has further enhanced the relationship of trust we share with our customers and partners. It also opens the door to new markets at home and abroad.

Finally, it reflects our commitment to an ongoing and shared progress approach.

### CE marking - European Conformity

ETRI fans are marked as follow:

This European CE marking means that ETRI fans comply with legal requirements of the applicable EC Directives.

These requirements include EMC regulations, electrical safety standards and Directive Machine.

For more detailed information, please consult the factory.

### REACH European regulation

(Registration, Evaluation, Authorization and Restriction of Chemical substances)

The REACH European regulation (Registration, Evaluation, Authorization and Restriction of Chemical substances), with the intention of protecting human health and environment, submits chemical substances to a registration and an authorization for the most dangerous substances. (Substances of Very High Concern: SVHC)

It sets a replacement of concerned substances, as soon as they are identified on the REACH Candidate List.

This regulation imposes a complete control of products used by the company and by any supplier.

ECOFIT continues to check that its suppliers comply with REACH requirements for all materials and substances used. Current analysis shows that ECOFIT do not use such substances.

### RoHS European Directive

(Restriction of use of certain Hazardous Substances)

The 2002/95/EC European Directive restricts the use of six hazardous materials in the manufacture of various types of electronic and electrical equipment.

Although this restriction is not applying to components, the conformity of components is also important for various customers.

RoHS conformity indicates that products don't contain any hazardous substances in superior concentrations to authorized maximum given by the Directive.

ECOFIT checks with its suppliers the conformity of their components to manufacture its fans and takes necessary steps to ensure the follow-up of the conformity.

For more information, please consult the ECOFIT website, standards section.

Most of our fans are UL, CSA and CE approved and according to European directives, they comply with EMI and electrical safety standards.

Certificates are available on request.

## METAL MESH FILTERS

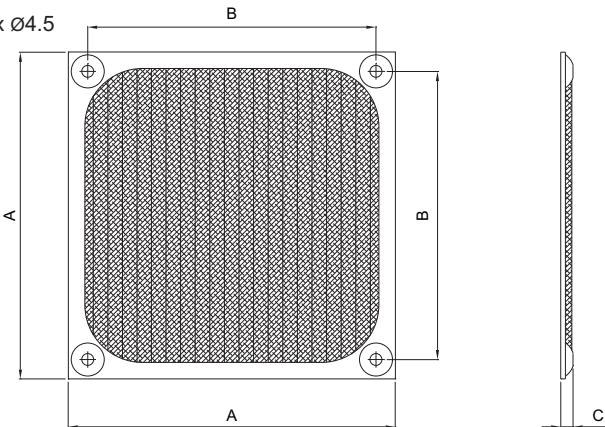

**Benefits:**

- High efficiency in filtering
- Smart finish allowing an easily accomodation to the equipment design
- Gives effective EMI/RFI protection

**Material:**

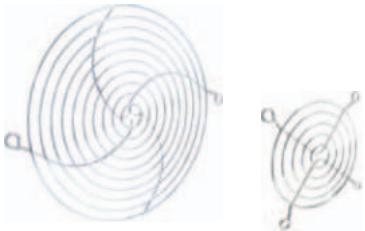

Aluminium

Holes: 4 x Ø4,5

Part number	Fans dimensions	Dimensions (mm)		
		A ( $\pm 1$ )	B ( $\pm 1$ )	C ( $\pm 0,5$ )
FLTR EMI 60-G Arg	60 x 60	63	50	4,3
FLTR EMI 80-G Arg	80 x 80	83,8	71,4	4,45
FLTR EMI 90-G Arg	92 x 92	92	82,4	4,45
FLTR EMI 120-G Arg	120 x 120	119,9	104,8	4,45

## METAL FINGER GUARDS

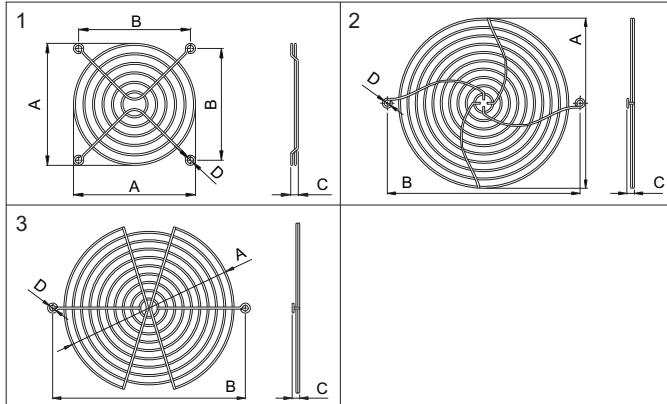

**Benefits:**

- Effective protection: the maximum space between each ellipse of the finger guard respects the values of the standards in use

**Material:**

Nickel-plated wire  
(UL-CSA)

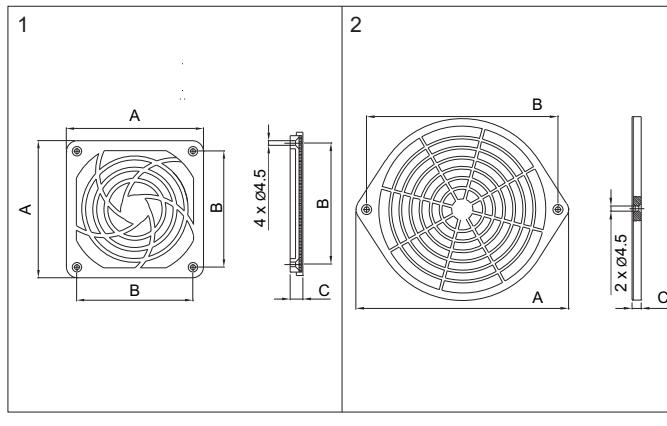

Part number	Fans dimensions	Model	Dimensions (mm)				Number of ellipses
			A ( $\pm 1$ )	B ( $\pm 1$ )	C ( $\pm 1$ )	D ( $\pm 0,5$ )

P-DGT PL PFG-172	172 x 150	2	180,3	162	7,9	FLTR PL F172/T102

## RA104 - RA105

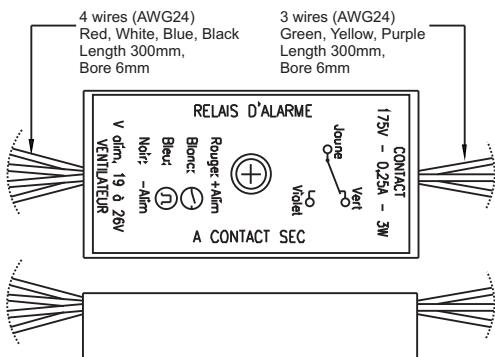

Desengaging frequency: RA104 - 25 Hz  
 Desengaging frequency: RA105 - 15 Hz

Supply: 24 V DC - 19 V to 26 V  
 Current: 4 mA for "Running" - 15 mA for "Default"  
 Operating temperature: 0°C to +70°C

Contact:  
 Switch off power: 3W  
 Max. voltage: 100 V  
 Max. current: 0,25 A  
 Contact resistance: 150mΩ

## WIRES OUTPUT

## RA107 - RA111

Desengaging frequency: 15 Hz

Supply RA107: 230 V - 50/60 Hz

Supply RA111: 115V - 50/60 Hz

Operating temperature: 0°C to +70°C

Contact:

Switch off power: 3W

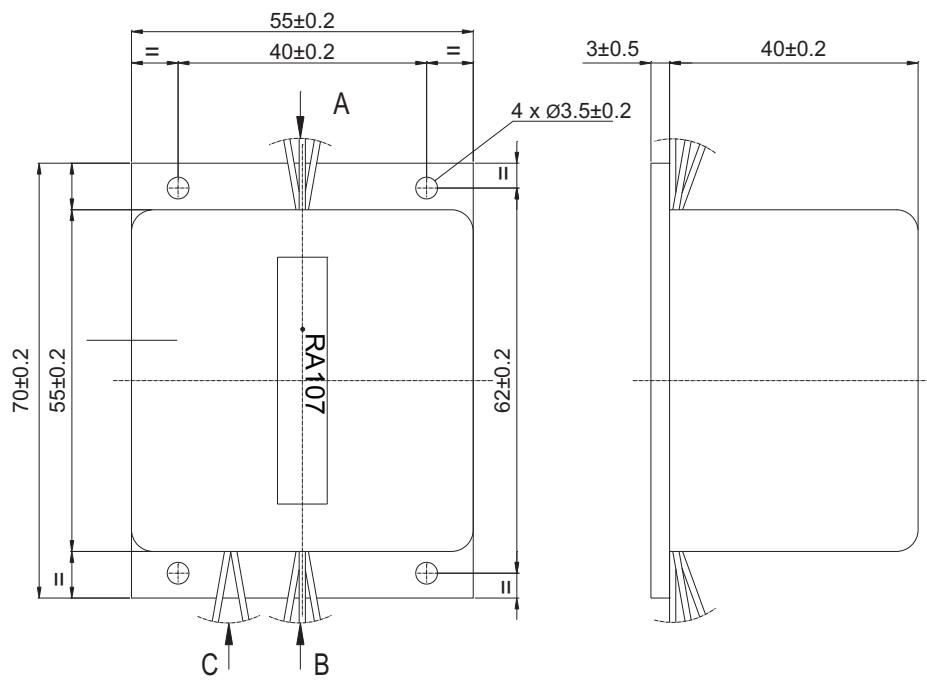

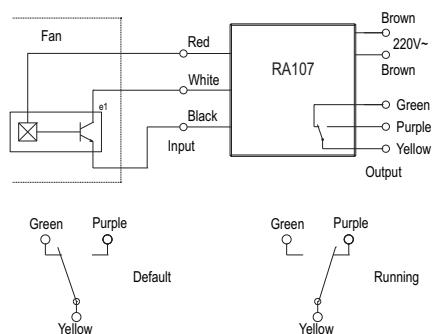

Max. voltage: 100 V

Max. current: 0,25 A

Contact resistance: 150mΩ

- A: 3 wires(AWG24)  
Red, White, Black  
Length300mm - Bore 6mm
- B: 3 wires(AWG24)  
Green, Yellow,Purple  
Length300mm - Bore 6 mm
- C: 2 wires(AWG24)  
Brown  
Length300mm- Bore 6 mm

## RA109 - RA112

Three fans controlled at the same time

Desengaging frequency: 15 Hz

Supply RA109: 12 VDC

Supply RA112: 24 VDC

Operating temperature RA109: 0°C to +50°C

Operating temperature RA112 A: -40°C to +70°C

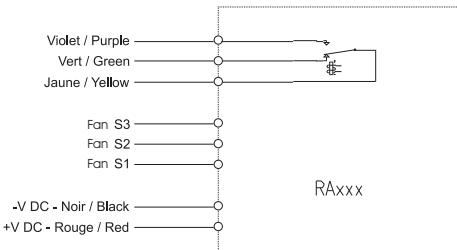

Contact:

Switch off power: 3W

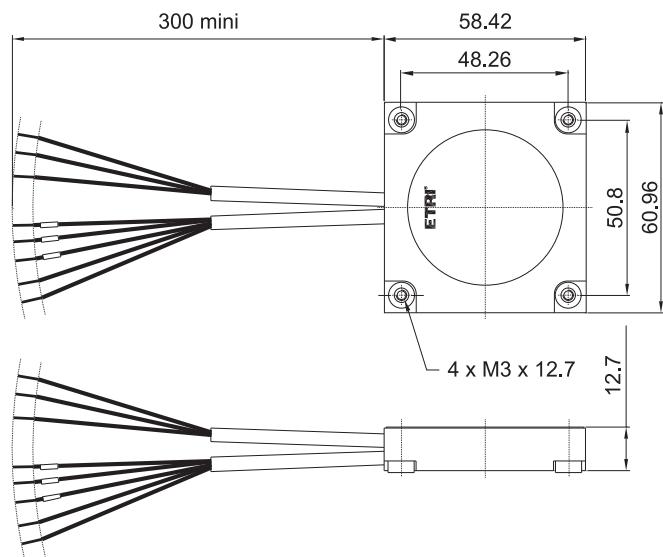

Max. voltage: 175 V

Max. current: 0,25 A

Contact resistance: 150mΩ

WIRES OUTPUT

#### A key partner in cooling solutions

ETRI's comprehensive fan line includes over 7000 fans which operate under a wide variety of voltages and frequencies. Thanks to extensive designing and testing equipment, our engineers are able to offer the best technical solution suitable to various applications, such as industrial, electronics, telecom, railway or military.

#### High quality fans

ETRI has been known for more than 60 years as a global leader in cooling products, and carries on its tradition of excellence using innovative designs and materials to produce high quality fans and blowers, through its ISO 9002 certified manufacturing plant. Most of ETRI fans are UL, CSA approved, and according to the European directives, they comply with EMI and electrical safety standards. Certificates are available on request.

#### An international presence

ETRI offers an international presence through its network of local offices (Europe & USA) distributors and representative offices in more than 50 countries. Complete list is available on our web site.

#### Votre partenaire en ventilation

Avec plus de 7000 références, ETRI propose une large gamme de ventilateurs répondant aux exigences les plus sévères pour des applications industrielles, électroniques, ferroviaires ou militaires. La gamme de produits standard est régulièrement complétée par des développements spécifiques réalisés sur cahier des charges.

#### Le choix de la qualité

ETRI vous apporte la réponse adaptée à vos besoins en vous proposant des solutions innovantes dans le domaine de la ventilation industrielle tout en garantissant les meilleurs niveaux de qualité. Les ventilateurs ETRI sont pour la plupart homologués UL et CSA, et conformément aux directives européennes, répondent aux normes EMI et de sécurité électrique. Les certificats sont disponibles sur simple demande.

#### Une présence internationale

Grâce à ses agences implantées en Europe et aux Etats-Unis, et à son large réseau de distributeurs, ETRI vous offre une présence internationale dans plus de 50 pays. La liste complète de nos représentants est disponible sur notre site internet.

#### About Rosenberg...

Rosenberg is a competitive medium sized company with around 1400 employees worldwide.

During the last 25 years the Rosenberg group has been complemented in Europe by six additional works in France, Italy, Hungary, Czech Republic and Germany, in addition to the numerous subsidiaries and partners around the world.

Our aim is for high quality production backed by top class service for our clients. Thus a continuous flow of information and good cooperation between you, our dear customers, and us is most important, to jointly achieve a continuous evolution of our products and their quality.

#### A propos de Rosenberg...

Rosenberg est une entreprise performante à taille humaine qui emploie environ 1400 collaborateurs dans le monde entier.

Durant ces 25 dernières années, le Groupe Rosenberg s'est développé en Europe avec 6 nouvelles implantations en France, Italie, Hongrie, République Tchèque ainsi qu'en Allemagne, en plus des nombreux partenaires et distributeurs déjà présents à l'échelle mondiale.

Notre objectif est d'assurer un très haut niveau de qualité de produits doublé d'un service clients irréprochable.

De ce fait, maintenir une communication constante et une bonne coopération entre vous, nos chers clients, et nous, est la condition clé pour le développement de nos produits et de notre savoir-faire.
